Istanbul, Türkiye · EU citizen · remote or relocation

iOS developer with 4 years building and shipping production apps in Swift, UIKit and SwiftUI — 6+ apps live on the App Store. Work spans greenfield architecture, BLE hardware control and offline-first sync. Comfortable owning features end to end: MVVM structure, REST integration, concurrency, persistence and performance work on legacy code.

EXPERIENCE

iOS Developer Vero Digital Solutions OOD

Feb 2025 — May 2026 · Sofia, remote

- Built time tracking and work-order features in BauBuddy, a field-operations app for construction teams: working, travel and break time per order, project/task assignment, and filtered work-hour summaries.
- Made data entry offline-first with CoreData/CoreStore persistence and RESTful sync on reconnect.
- Diagnosed and fixed high-priority production bugs, cutting crash rates and stabilising releases.
- Refactored legacy screens into modular MVVM and reworked GCD flows to remove race conditions and UI blocking.

Software Developer Car4Future Technologies

Oct 2022 — Dec 2024 · Izmir

- Built the Car4Future Smart City EV app from scratch in SwiftUI and UIKit: location-based station search, BLE charger control, authentication and payments.
- Shipped CarPlay and Apple Watch extensions to carry the app across the Apple ecosystem.
- Owned CoreBluetooth charger communication and memory optimisation — 30% faster app performance.

SHIPPED SIDE PROJECTS

Bloomendy cozy merge-puzzle game

Solo · App Store

- Designed, built and shipped alone — game architecture through store presence.
- Kept game rules as a pure, render-independent core under unit test, so logic is verifiable without a simulator; Game Center weekly and all-time leaderboards behind a custom SwiftUI podium UI.

Supkano SUP & kayak training tracker with a social feed

Solo · App Store

- GPS route recording with distance, speed and duration stats; communities with chat and events; a photo feed; and XP, levels and badges driving progression.
- Multi-template share cards with Instagram Stories export, plus the push-notification infrastructure. Swift, UIKit.

SKILLS

Languages	Swift
Frameworks	UIKit, SwiftUI, SwiftData, CoreData, CoreStore, CoreBluetooth, CoreLocation, MapKit, CarPlay, WatchKit, Game Center, StoreKit, Firebase (Auth, Analytics, Realtime DB, Remote Config), Mapbox, Lottie
Practice	MVVM, modular architecture, REST APIs, GCD & async/await, offline-first sync, in-app purchases & third-party payment SDK integration, XCTest unit testing, performance profiling, App Store Connect & TestFlight, Git/GitLab

EDUCATION, LANGUAGES & REFERENCES

BSc Mathematics — Izmir Institute of Technology, Izmir

2015 — 2022

Turkish · English
